a very good game. If you have ever played Minecraft Classic and wanted to go back and play it you now can play ClassiCube which is recreation of the classic version of Minecraft, but with additional features like custom blocks, texture pack support per server (or per server map), etc... It is still fun to play or explore other people's creations on the multiplayer server even when there is no huge playerbase. I occasionally have played on ClassiCube when it wasn't on Steam just to hang out and it's definitely worth the money over here.. I got this game for my mac. It says it's compatible with mac computers, but it's actually not. Upon opening a new world, I'm always unable to place blocks and will crash within a few seconds. I can't even exit out the game without shutting down my whole computer.

If you have a mac, stay away.. Bought for the nostalgic value, so I consider it nearly priceless.. Venk is hot.

I've been playing Minecraft Classic since 2012, this game is one of the best games I have ever played to this day. The simplicity of it makes it fun. You can play Freebuild, Lava Survival, Zombie Survival, CTF, Lazer Tag, and so many other fun gamemodes that really keep the game interesting. The community is also super friendly too so it's a definite must play.

Only thing I gotta say is that if you don't have the money, you can still play it for free on [classicube.net](http://classicube.net) both online or with the launcher. [https://www.youtube.com/watch?v=sq\\_Fm7qfROk](https://www.youtube.com/watch?v=sq_Fm7qfROk). Just play the Zombie Survival server~. Absolutely Perfect. Everything from minecraft classic and more!. Very good clients run smooth and it's working better than ever!

-xDoNT. I have been with ClassiCube since the summer of 2015, so my total amount of hours I spent on this game is not accurate at all. I'm aware that ClassiCube is free on their website as it is open source, but I bought this so I could help the developers.

The people that worked on ClassiCube have spent their time making this game work and look good. What I like about ClassiCube is that it is simple, can run on less powerful computers and so much more. Since the game is open source, you can do anything you want to do with it. Next, ClassiCube also supports the CPE protocol (an extension of the original Minecraft Classic) that allows you to have infinitely many custom blocks, models, bigger maps, and more.

TL:DR Scroll up and get it.

(Sorry for the bad grammar, I'm not good with English and only quickly typed up this review.)
